PROFESSIONAL SUMMARY

Senior Mobile / Full Stack Developer with 7+ years of experience delivering scalable, high-performance applications across mobile and web platforms. Specialized in building cross-platform mobile applications using React Native, with strong backend integration experience using RESTful APIs and Laravel-based services. Proven ability to collaborate across design and engineering teams throughout the full development lifecycle—from concept and architecture to deployment on App Store and Google Play. Strong advocate of clean architecture, SOLID principles, and performance-driven development, with hands-on experience in CI/CD pipelines, state management, and secure mobile application delivery.

SKILLS

Mobile Development

- React Native (Cross-Platform iOS & Android)
- Mobile App Architecture & Performance Optimization
- App Navigation, Animations, Offline Caching
- State Management: Redux, Context API, Zustand
- App Store & Google Play Deployment

Backend & API Integration

- RESTful API Integration for Mobile Applications
- PHP (Laravel), Python (Django, FastAPI)
- Secure Authentication & Authorization (JWT, OAuth)
- API Performance Optimization & Versioning

DevOps & CI/CD

- Git (Advanced Workflows)
- CI/CD Pipelines for Mobile & Backend (GitHub / GitLab)
- Docker (for backend services)

Architecture & Code Quality

- SOLID Principles, Clean Architecture
- Modular System Design
- Unit & Integration Testing
- Code Reviews & Technical Documentation

Databases & Caching

- PostgreSQL, MySQL, SQL Server
- Redis, In-Memory Caching
- Data Modeling & Query Optimization

WORK EXPERIENCE

Full Stack Developer

Maham IT Solutions, Riyadh, Saudi Arabia **Jan 2025 – Present**

- Developed key modules of the Maham-AI ERP system (HR, CRM, Services) and integrated AI-driven analytics to enhance automation and decision-making.
- Designed and implemented PostgreSQL relational databases, ensuring scalability, data integrity, and optimized query performance.
- Implemented full-stack features using React and .NET Web API, fully integrated with Supabase services for database, authentication, and real-time synchronization.
- Improved system performance through SQL optimization, Redis caching, and backend refactoring, reducing response time and server load.
- Implemented a complete Role-Based Access Control (RBAC) system, enabling secure permissions and multi-level user access.
- Managed GitHub repositories, enforced code standards, and maintained CI/CD pipelines for continuous delivery.
- Deployed and monitored production environments on Alibaba Cloud, ensuring high availability, security, and reliable performance.

Information Technology Specialist

Dar Al Atebaa Hospital, Taiz, Yemen **Feb 2023 – May 2024**

- Performed system and network diagnostics, contributing to an efficient technological work environment.
- Provided comprehensive technical support to staff, troubleshooting and resolving network issues to ensure smooth operational flow.
- Managed and maintained the hospital’s IT infrastructure, ensuring its stability and security.

Backend Developer

HowbaniSoft, Sana'a, Yemen **Feb 2019 – Nov 2022**

- Designed, developed, and maintained backend systems using .NET technologies.
- Built, optimized, and managed SQL Server databases to improve performance and reliability.
- Developed secure and scalable RESTful APIs for various business applications.
- Implemented Docker to containerize services and streamline deployment workflows.
- Utilized GitHub for version control, code reviews, and collaborative development.
- Contributed to system architecture improvements and backend performance optimization.
- Worked efficiently under pressure, delivering high-quality backend solutions that enhanced the company’s technical operations.

Full-Stack web and Mobile Developer

Al-Rahal for IT Solutions And Web Services, Taiz, Yemen **May 2017 – Dec 2018**

- Built and deployed user-friendly and responsive web applications using HTML, CSS, JavaScript, and React.js.
- Designed and implemented scalable and secure back-end systems utilizing .NET, and Django frameworks.
- Created robust Fast APIs to facilitate efficient data exchange between front-end and back-end applications.

- Led code reviews to ensure code quality and adherence to coding standards and best practices.
- Collaborated closely with cross-functional teams (e.g., marketing and designers) to analyze requirements, design solutions, and ensure successful project implementation.

Key Projects

Onemay ERP – Event Management Enterprise System

- Led the development of an Enterprise-level ERP platform for managing large-scale events, exhibitions, and festivals.
- Built the platform using Next.js 15, React 19, TypeScript for the frontend, and .NET 8, ASP.NET Core for the backend.
- Developed 30+ fully integrated modules covering event operations, visitor management, financials, HR, and inventory.
- Implemented real-time crowd management using AI video analytics, IoT sensors, and SignalR live updates.
- Built reusable component architecture and a monorepo setup (Turborepo), effectively reducing development time by 70%.
- Successfully migrated the entire frontend from Vue 3 to React/Next.js while preserving all existing functionality.
- Designed and implemented 200+ RESTful API endpoints and 100+ pages with complete CRUD workflows.
- Added key features including bilingual support (English/Arabic + RTL), a QR ticketing system, role-based access control, and payment gateway integration.
- Optimized the database schema (PostgreSQL, SqlSugar) with Redis caching for high-performance operation.

Legatoo AI platform for analyze the legal cases

- Developed a legal consultant web site to analyze contracts, identify ambiguous and contradictory clauses, and provide actionable legal advice.
- Leveraged AI platforms for contract analysis and implemented Retrieval-Augmented Generation (RAG) techniques for answering legal inquiries.
- Improved accuracy in legal document review, provided context-aware legal consultations, and streamlined contract validation processes.

Maham-AI ERP – AI-Powered Enterprise Resource Planning System

- AI-powered ERP platform designed to automate enterprise operations across HR, CRM, and service/location management. Built using .NET Web API, React, and Supabase with PostgreSQL.
- Developed key operational modules including HR Management System and Boulevard Rental Tracking System for managing shops, leases, and service areas
- Designed and implemented a scalable database architecture (PostgreSQL) ensuring data integrity, modular structure, and optimized relational models
- Built responsive and interactive frontend interfaces using React, fully integrated with .NET APIs
- Implemented a complete Role-Based Access Control (RBAC) system enabling granular permissions and secure access across all modules
- Enhanced system performance through SQL query optimization, caching strategies, and backend refactoring
- Collaborated within an 8-member team to design, develop, and deliver core ERP functionalities and AI-driven features
- Integrated AI capabilities using OpenAI API for automated insights, data analysis, and workflow assistance
- Leveraged Supabase for authentication, storage, and real-time features, enabling a modern cloud-driven architecture
- Tech: .NET 8, ASP.NET Core, React, Supabase, PostgreSQL, OpenAI API, Tailwind, JWT, Docker

Ra'ayati Secure, Scalable EHR Platform

- Contributed to the development of the unified "Ra'ayati" Electronic Health Record (EHR) platform designed to centralize medical records for citizens across the country.
- Utilized .NET for building backend services and secure data handling.
- Designed a scalable architecture enabling high system reliability across diverse healthcare entities (government and private hospitals, clinics).
- Implemented a secure user and permission management system with strict access control.
- Enabled support for multi-role medical workflows (doctors, nurses, pharmacy, administrative staff).
- Facilitated interoperability between healthcare providers to improve treatment accuracy and patient experience.
- The platform enabled full electronic operations, including documentation for diagnoses, prescriptions, and medical history.

Web Application for Quran Memorization

- Designed and developed a web application to assist users in memorizing the Holy Quran, featuring interactive tools for tracking progress and improving retention.
- Built front-end interfaces with Bootstrap 5 and back-end logic using Django framework, integrated with PostgreSQL for data management.
- Developed Fast APIs for seamless front-end and back-end interaction, implemented progress tracking and quiz modules, and ensured optimized performance through rigorous testing and debugging.

Web Application for Car Parking Reservation

- Developed a web application to streamline parking spot reservations, integrating real-time availability and payment systems for urban parking solutions.
- Built using Laraveel framework for back-end logic, Bootstrap for responsive frontend design, and C for programming ESP32 and IR sensors to detect parking status (empty/occupied).
- Integrated PayPal for secure payment processing, incorporated Google Maps for location-based parking searches, and ensured real-time updates of parking availability through IoT sensor integration.

Attendance System

- Developed a secure attendance system leveraging face recognition technology to automate employee check-in and check-out processes.
- Built using the Laraveel framework with php for back-end logic, integrated with OpenCV for face recognition, and PostgreSQL for data storage.
- Implemented real-time facial recognition for accurate attendance tracking, provided administrative dashboards for monitoring, and ensured data security with encrypted storage.

Health Monitoring for Pilgrims

- Developed a Flutter-based mobile application integrated with Wear OS smartwatches to monitor pilgrims' vital signs during Hajj, ensuring timely medical intervention.
- Built front-end with Flutter, back-end with python and django for AI-driven data analysis, and integrated with Wear OS for real-time data collection.
- Collected vital signs (heart rate, oxygen levels) via smartwatches, used AI to analyze health data, and sent real-time alerts to nearby medics for critical cases, with geolocation support for rapid response.

Home Security App

- Developed an Android application to enhance home security by detecting unauthorized access through doors and windows.

- Built using Java for Android native development, integrated with Arduino, SIM module, and motion sensors for real-time monitoring.
- Sent push notifications to the user's mobile device upon detecting intrusions, provided real-time alerts, and ensured reliable communication through SIM module integration.

Wheelchair Monitoring App

- Developed an Android application to monitor wheelchair status for disabled individuals, ensuring safety through real-time alerts and tracking.
- Built using Java for Android native development, integrated with Arduino, SIM module, and tilt sensors, and connected to Google Maps for location tracking.
- Detected wheelchair tilt events and sent notifications to caregivers' mobile devices, provided real-time location tracking via Google Maps, and ensured robust sensor communication.

Heart Rate Monitoring App

- Developed an Android application for remote monitoring of patients' vital signs, enabling doctors to track health metrics in real-time.
- Built using Java for Android native development, integrated with Arduino, SIM module, heart rate, blood pressure, and temperature sensors.
- Enabled real-time monitoring of heart rate, blood pressure, and temperature, sent alerts to doctors for abnormal readings, and provided a user-friendly interface for remote patient management

EDUCATION

Bachelor of **Engineering in Telecommunications and Information Technology**
University of Taiz , Taiz, YEMEN GPA: 83.35% (Ranked 5th in Class) **Graduated: 2017**

CERTIFICATIONS

- Web Application Design and Development, Global Human Development and Research Center.
